

A stylized illustration of a desk setup on a dark blue background. It includes a laptop with a teal screen and orange keyboard, a stack of three books in teal, orange, and white, a potted plant with green leaves in an orange pot, a teal pen holder with three pens, and a tablet displaying a map with orange lines and a teal grid pattern.

# Final Project "Daily Financial Investment Risk Aid"

CSCI 4231: Data Storage and Analysis, Spring 2023, KBTU

by Kozhakhmet Nagashybaiuly

# Motivation and Objective

The daily financial investment risk aid is intended to deliver unified financial assistance by combining hard facts with social media data. It will provide users with historical stock movement information, forecasts for future closing costs, and trending viral terms and phrases on social media. The daily financial investment risk aid's ultimate purpose is to provide a tool that supports users in making informed investment decisions based on a combination of hard data and social media trends.

The problem lies in determining the forecasts of the future value of the shares.

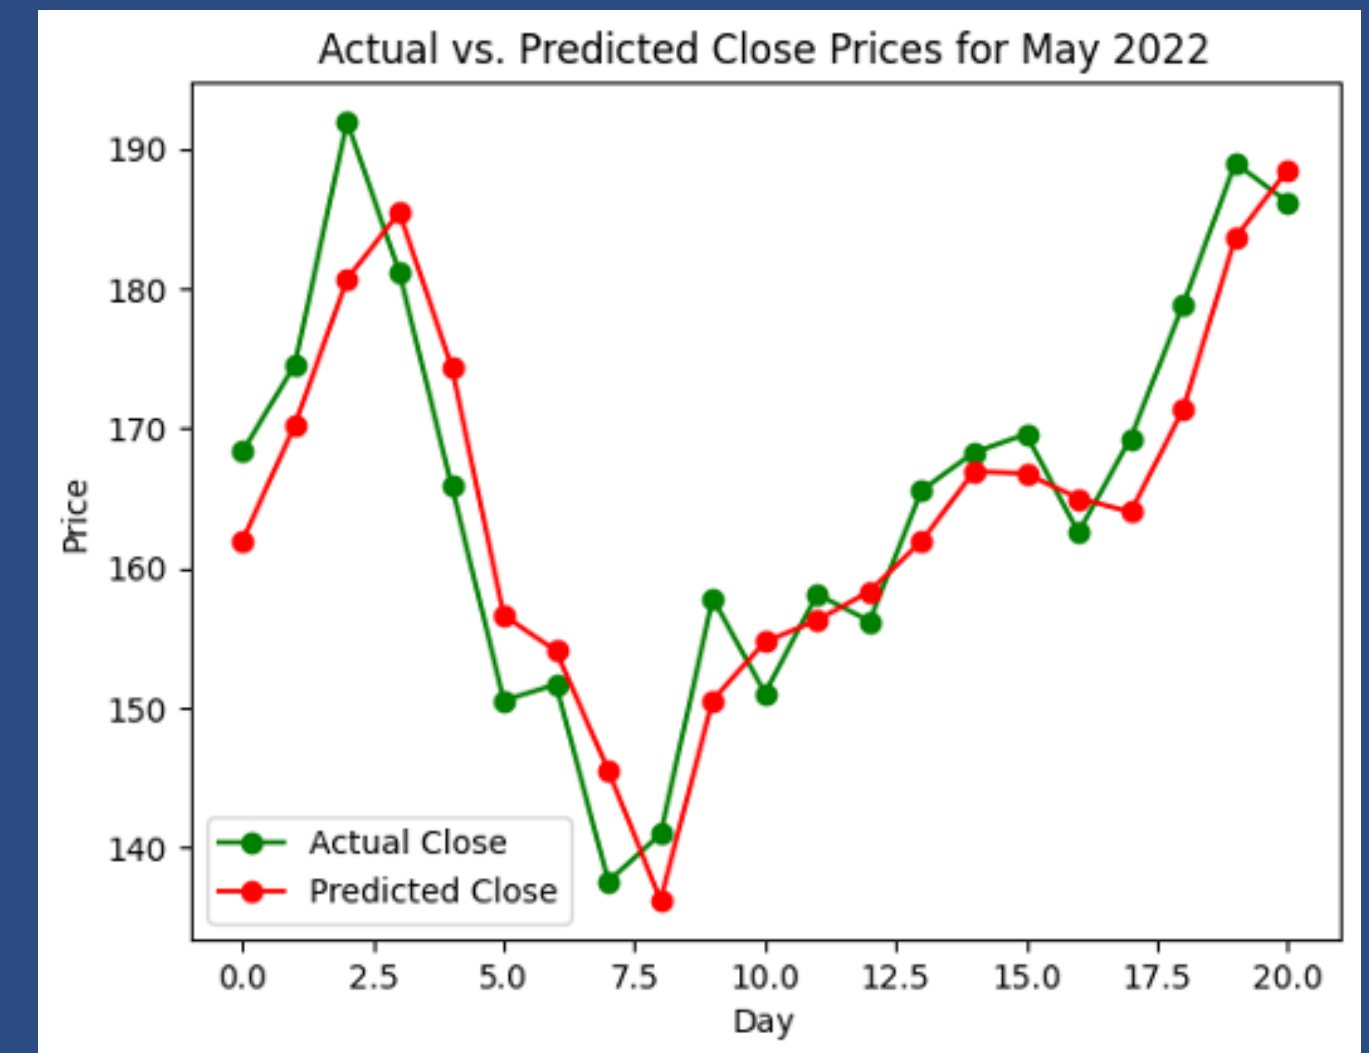

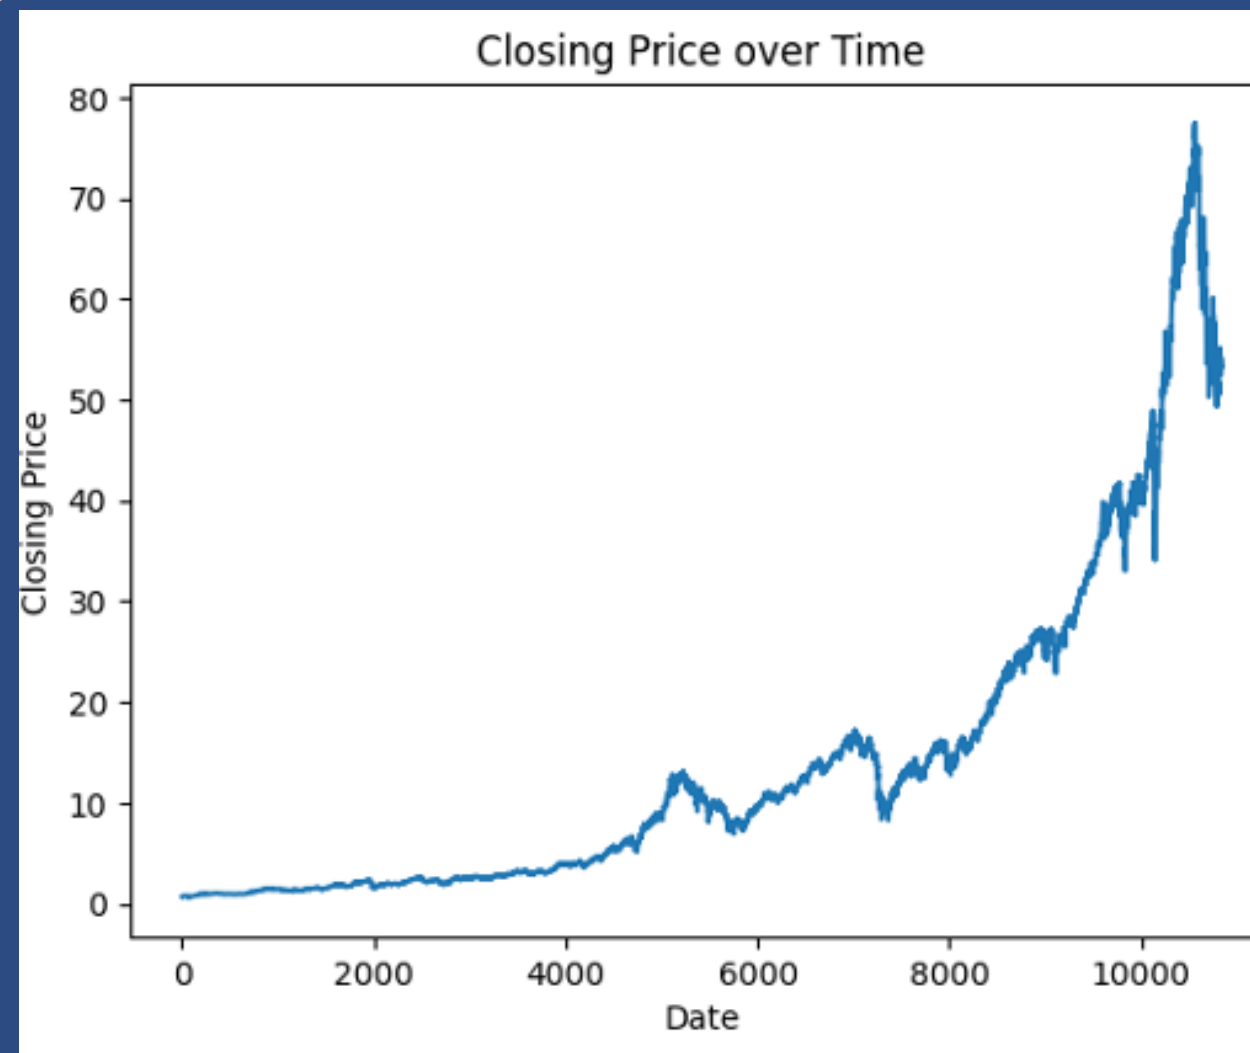

# Algorithm and Training Model

A total of 4 unique datasets are being collected daily for the processing and visualization of relevant financial and global event data. Each dataset have columns such like: Open, High, Low, Close, Volume, Dividends, Stock Splits, Year, Month, Day, Hour, Minute.

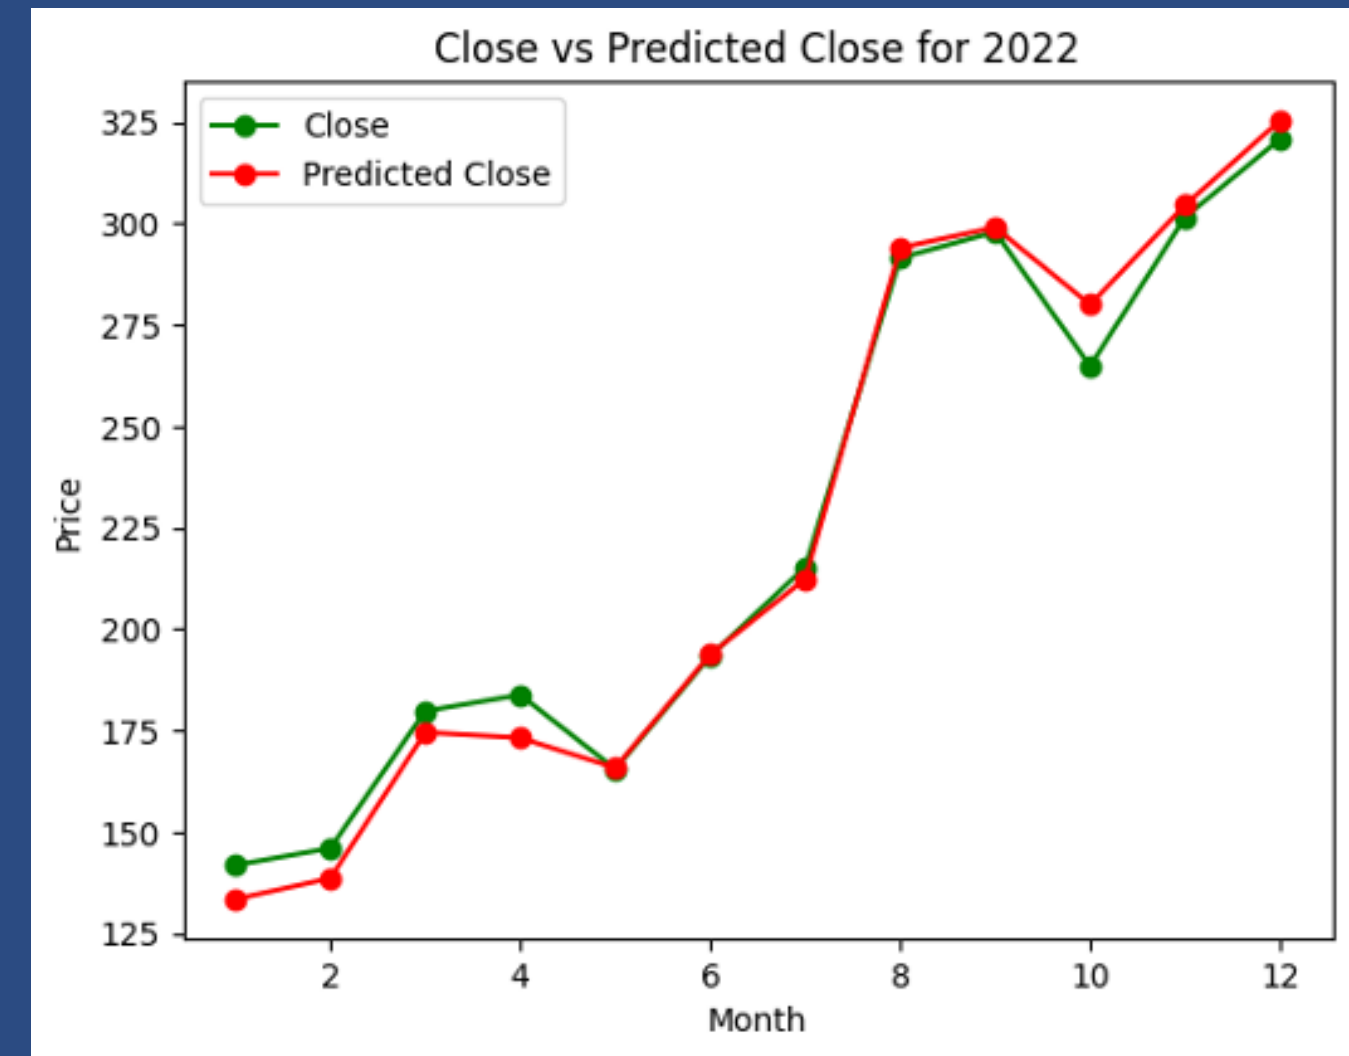

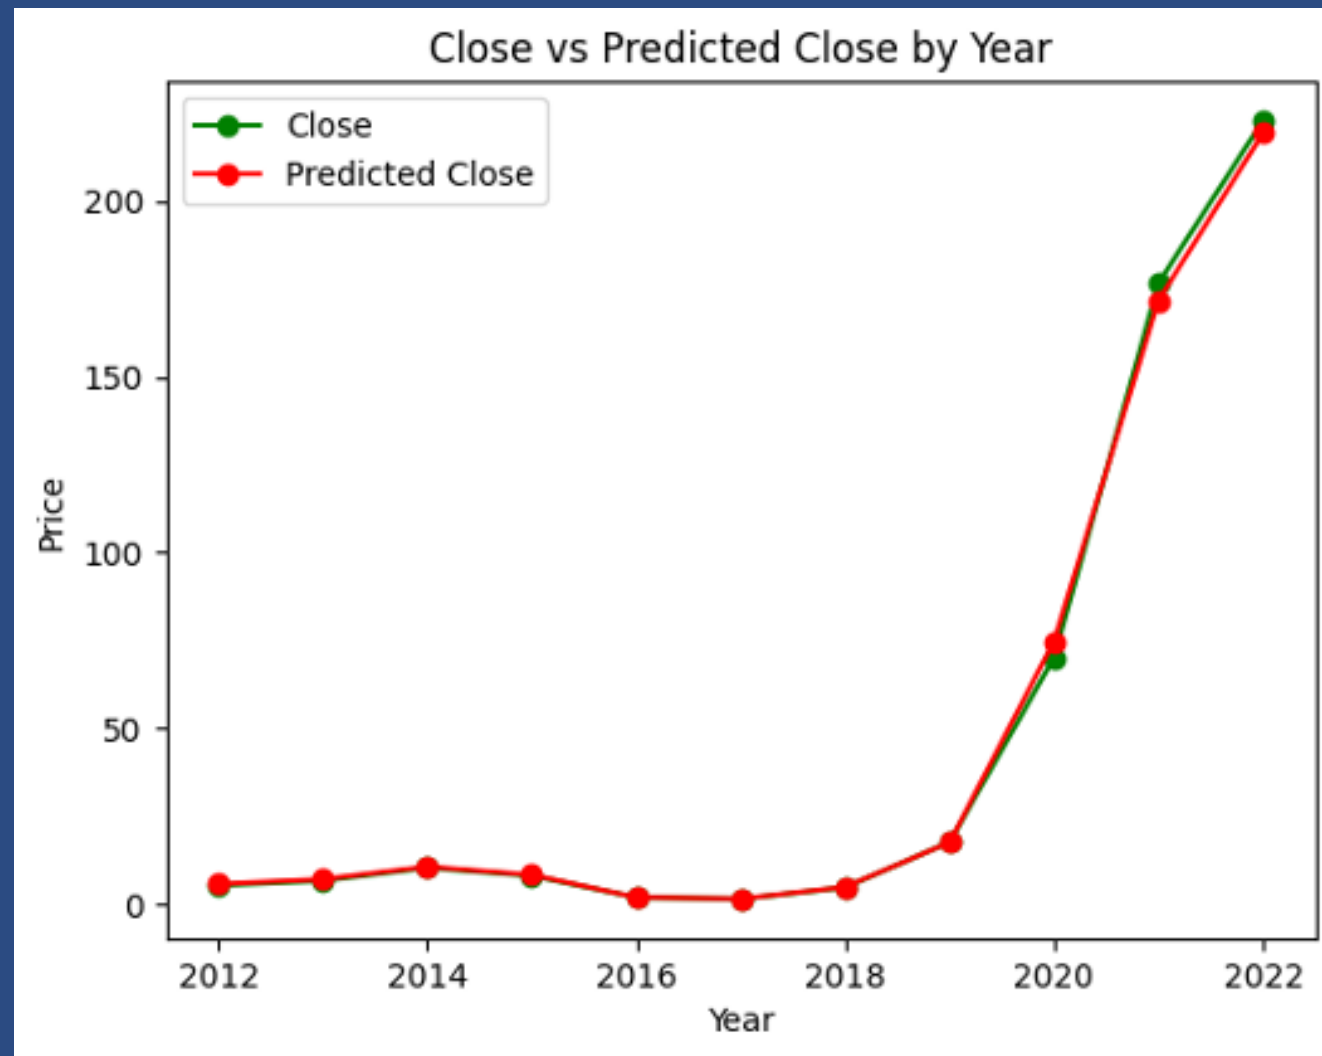

The project uses a Linear Regression model using the Pyspark library.

# Results and Performance Evaluation

RMSE: 2.409557968299586  
MSE: 5.805969602596028  
R2: 0.998993443148851

# Conclusion

The Daily Financial Risk Aid created a cloud computing platform to provide investors with valuable information. The project utilized a cloud computing backend, open-source data acquisition libraries, and open-source repository frameworks for storage, resulting in a consolidated front-end financial visualizer for users. Future work could build upon this project by visualizing different investment vehicles, sourcing social discord from other social media platforms, and utilizing further models for investment predictions.
